

Help Us Fight the Opioid Epidemic

MVP Health Care® (MVP) is dedicated to working with you to fight the opioid epidemic, but we need your help.

Please take the short survey at bitly.com/2SzWhKf to let us know what tools and resources you find most helpful when prescribing opioids. Your answers will help us develop programs that will make the greatest impact so we can support providers and members in the fight against the opioid epidemic.

Your feedback is greatly appreciated!

Did you know?

Upon request, MVP can pull prescription data for your patients on >90 MME of opioid therapy for ≥7 days. Please contact your PR representative to request a report.

Medicare Opioid Safety Edit with Benzodiazepines Or Duplicative Long-Acting Opioid Therapy

If a patient fills a 7-day supply opioid prescription at the same time as a benzodiazepine prescription, or multiple long acting opioids, the opioid prescription(s) will be rejected. These can be overridden by the pharmacist at the point of sale (soft edit override) and does not require a coverage determination. Pharmacists may contact the CVS Helpdesk for assistance. The purpose of this additional edit is to determine if the patient's opioid use is safe and clinically appropriate.
