

## Pediatric Lead Testing Program

MVP Health Care® (MVP) would like to inform you that the American Academy of Pediatrics (AAP) is currently recruiting pediatric primary care practices to participate in the AAP Lead Testing Extension for Community Healthcare Outcomes (ECHO). **Project ECHO** is a tele-mentoring program designed to create communities of learners by bringing together health care providers and experts in topical areas using didactic and case-based presentations to foster an all learn, all teach approach.

Leveraging technology, quality improvement methodology, clinical management tools, and case-based learning, providers develop knowledge on diseases, conditions, and processes. This program will offer CME, Maintenance of Certification MOC Part 2 and MOC Part 4 credits to participants.

Project ECHO serves as a forum for pediatric primary care practices to improve knowledge and skills around blood lead testing and follow-up care in order to better identify and treat children affected by lead exposure.

Applications for participation are being accepted now through January 15, 2020. More information can be found at [aap.org](http://aap.org).
